

ONLYX PRODUCT RANGE

THE TECHNOLOGY
OF THE FUTURE

TECHNOLOGY STRENGTH DESIGN

Experience in the service of innovation

With the development of the ONYX retractable arms product range, the LLAZA brand is marking a new milestone in the history of the solar protection sector. Technology, strength and design come together in a product backed by more than 50 years of research and experience in the manufacture of tensioning systems.

Top-grade services and advanced design

- Strong and reliable: with the tension optimised for the complete operation.
- Versatile: with or without lights, it is compatible with the majority of LLAZA brand brackets and cassette awnings.
- Attractive and contemporary: its balanced design is the result of combining advances in integral lacquering, a 100% metallic finish, robustness and contemporary lines.

Functionality and versatility

With the ONYX product range, professionals have a product that is a benchmark in technology and reliability and that can be used with in most installations with or without the cassette awning.

COMPATIBILITY

SYSTEMS	GARDEN AWNINGS	CASSETTE AWNINGS
COMPLET PRO 350	DUOX butterfly awning	STORBOX 300
ART MONOBLOC 350		MAXIBOX 300
MONOBLOC PLUS 400		SPLENBOX 400
		MATICBOX 350
		MONOBX 400

The warranty of a major brand

This is the firm that has made the most technological innovations in retractable arms.

You get the reliability of a tensioning system that has been tested and has evolved over more than 20 years.

Our products are backed by the security of a company that is an international leader and that manufactures its own systems as well as systems for other important firms on the market.

BALANCED AND SURPRISING DESIGN

The ratio between the upper and lower sections of the arm result in balanced lines that are combined with the compact articulation of difficult angles.

RELIABLE AND LONG-LASTING

The tension transmission system of this product range is the result of more than 20 years of research. The level of reliability achieved makes it deserving of the trust and respect of major brands in the sector, and it's backed by class 3 durability compliance according to standard EN13561:2015.

The design of the ball joint improves services when half open, and our stress test clearly places the ONYX product range above other systems on the market.

DAY AND NIGHT AWNINGS

The ONYX product range includes the ONYX LUX model with an LED lighting system. The transmission of current is completely integrated within the elbow, not permitting cables or other elements to protrude out of the ball joint.

ONYX LUX goes beyond just being an aesthetic advantage; it is the only market solution that completely hides electrical cabling and connections within the arm itself. The constant R&D efforts of our Technical Department have resulted in an ingenious mechanism that protects power transmission while providing Class 3 compliance.

The light shines out of the upper and lower portions of the arm, and with its angle of inclination, illuminates a broad area where needed most.

100% METALLIC FINISH

All parts in the system are manufactured of aluminium and stainless steel. This feature allows for uniform colour without the disruptiveness of plastic parts. The finish is harmonious and elegant in addition to providing an appearance of greater resistance.

INTEGRAL LACQUERING

The system for manufacturing LLAZA retractable arms allows for integral lacquering between parts and profiles so that the places where they join together are covered and sealed. This way, in addition to a better appearance, we can offer better protection against inclement weather conditions.
